11 Enter abstract here. Each new line herein must be indented, like this line.

12 *Keywords:* effect size, mean differences, variance overlap, app, tutorial

The title

What are effect sizes? - Lakens 13

Why are they so damned important - 1999 task force says so - help you power, sample size planning - p values are useless - useful for meta-analyses

Why is it so hard to do this shiz - Fritz (maybe Fiedler's) work on under reporting of effect sizes - Geoff Cummings papers on what is what non central blah is not easy (also Smithson, Kelley) - so we are trying to make it easy! look at us go!

Now for the section below, let's think about what sections to include. The information below is just normal papaja stuff.

We are targeting this journal:

<http://www.apa.org/pubs/journals/met/call-for-papers-tutorials.aspx>

So, let's see if we can find some of those and format it similarly. I think if you found the Maxwell shiny app for power that would be a great one to model after.
